# Chapter 1

## Hierarchical Index

### 1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Album . . . . .	7
Ficheiros . . . . .	11
Foto . . . . .	12
Pagina . . . . .	17
Pessoa . . . . .	22
QDialog	
Acerca . . . . .	7
AlterarAlbum . . . . .	10
AssociarWindow . . . . .	11
ConfiguracaoNiveis . . . . .	11
ImageViewer . . . . .	15
NovaPagina . . . . .	16
NovoAlbum . . . . .	17
NovoPerfil . . . . .	17
Perfil . . . . .	21
Remover . . . . .	24
SlideShow . . . . .	25
SlideViewer . . . . .	25
QMainWindow	
MainWindow . . . . .	16

## Chapter 2

# Class Index

### 2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">Acerca</a>	7
<a href="#">Album</a>	
Used to represent albums	7
<a href="#">AlterarAlbum</a>	10
<a href="#">AssociarWindow</a>	11
<a href="#">ConfiguracaoNiveis</a>	11
<a href="#">Ficheiros</a>	
Used for saving this program's data permanently using binary files	11
<a href="#">Foto</a>	
Used represent a photo	12
<a href="#">ImageViewer</a>	15
<a href="#">MainWindow</a>	16
<a href="#">NovaPagina</a>	16
<a href="#">NovoAlbum</a>	17
<a href="#">NovoPerfil</a>	17
<a href="#">Pagina</a>	
Used to represent a page	17
<a href="#">Perfil</a>	21
<a href="#">Pessoa</a>	
Used to represent a person	22
<a href="#">Remover</a>	24
<a href="#">SlideShow</a>	25
<a href="#">SlideViewer</a>	25

## Chapter 3

# File Index

### 3.1 File List

Here is a list of all documented files with brief descriptions:

<b>acerca.h</b>	??
<a href="#">album.cpp</a>	27
<a href="#">album.h</a>	27
<b>alteraralbum.h</b>	??
<b>associarwindow.h</b>	??
<b>configuracaoniveis.h</b>	??
<a href="#">ficheiros.cpp</a>	27
<a href="#">ficheiros.h</a>	28
<a href="#">foto.cpp</a>	28
<a href="#">foto.h</a>	29
<b>imageviewer.h</b>	??
<b>mainwindow.h</b>	??
<b>novapagina.h</b>	??
<b>novalbum.h</b>	??
<b>novoperfil.h</b>	??
<a href="#">pagina.cpp</a>	29
<a href="#">pagina.h</a>	29
<b>perfil.h</b>	??
<a href="#">pessoa.cpp</a>	30
<a href="#">pessoa.h</a>	30
<b>remover.h</b>	??
<b>slideshow.h</b>	??
<b>slideviewer.h</b>	??

## Chapter 4

# Class Documentation

### 4.1 Acerca Class Reference

Inheritance diagram for Acerca:

#### Public Member Functions

- **Acerca** (QWidget \*parent=0)

The documentation for this class was generated from the following files:

- `acerca.h`
- `acerca.cpp`

### 4.2 Album Class Reference

The [Album](#) class is used to represent albums.

```
#include <album.h>
```

## Public Member Functions

- [Album](#) (QString, QString, QString, QString)  
*Album::Album is one of the [Album](#) class constructor.*
- [Album](#) (QString, QString, QString, QString, QDate, QDate)  
*Album::Album is one of the [Album](#) class constructor.*
- QString [getNome](#) ()  
*Album::getNome returns the album's name.*
- QString [getPasta](#) ()  
*Album::getPasta returns the page's directory.*
- QString [getDescricao](#) ()  
*Album::getDescricao returns the album's description.*
- QString [getTipo](#) ()  
*Album::getTipo returns the type of page given to the album.*
- QDate [getDataInicioAlbum](#) ()  
*Album::getDataInicioAlbum returns the starting date of the album.*
- QDate [getDataFimAlbum](#) ()  
*Album::getDataFimAlbum returns the ending date of the album.*
- void [setNome](#) (QString)  
*Album::setNome sets a new name for the album.*
- void [setPasta](#) (QString)  
*Album::setPasta sets the album's folder name.*
- void [setDescricao](#) (QString)  
*Album::setDescricao sets the description of the album.*
- void [setDataInicioAlbum](#) (QDate)
- void [setDataFimAlbum](#) (QDate)

## Public Attributes

- QList< [Pagina](#) \* > **ListaPagina**
- QList< [Pessoa](#) \* > **ListaPessoas**

### 4.2.1 Detailed Description

The [Album](#) class is used to represent albums.

### 4.2.2 Constructor & Destructor Documentation

#### 4.2.2.1 [Album](#)() [1/2]

```
Album::Album (
    QString nome,
    QString pasta,
    QString tipo,
    QString descricao )
```

[Album::Album](#) is one of the [Album](#) class constructor.

## Parameters

<i>nome</i>	is the <a href="#">Album</a> 's name.
<i>pasta</i>	is the name of the folder that contains the album.
<i>tipo</i>	is the type of page.
<i>descricao</i>	is the description of the album.

## 4.2.2.2 Album() [2/2]

```
Album::Album (
    QString nome,
    QString pasta,
    QString tipo,
    QString descricao,
    QDate dataInicio,
    QDate dataFim )
```

[Album::Album](#) is one of the [Album](#) class constructor.

## Parameters

<i>nome</i>	is the <a href="#">Album</a> 's name.
<i>pasta</i>	is the name of the folder that contains the album.
<i>tipo</i>	is the type of page.
<i>descricao</i>	is the description of the album.
<i>dataInicio</i>	is the starting date of the album
<i>dataFim</i>	is the ending date of the album

## 4.2.3 Member Function Documentation

## 4.2.3.1 setDescription()

```
void Album::setDescription (
    QString novoNome )
```

[Album::setDescription](#) sets the description of the album.

## Parameters

<i>novoNome</i>	is the description to be given to the album
-----------------	---

#### 4.2.3.2 setName()

```
void Album::setName (
    QString novoNome )
```

[Album::setName](#) sets a new name for the album.

##### Parameters

<i>novoNome</i>	is the name to be given to the album
-----------------	--------------------------------------

#### 4.2.3.3 setPasta()

```
void Album::setPasta (
    QString novoNome )
```

[Album::setPasta](#) sets the album's folder name.

##### Parameters

<i>novoNome</i>	is the name to be given to the folder
-----------------	---------------------------------------

The documentation for this class was generated from the following files:

- [album.h](#)
- [album.cpp](#)

## 4.3 AlterarAlbum Class Reference

Inheritance diagram for AlterarAlbum:

### Public Member Functions

- **AlterarAlbum** (int, QWidget \*parent=0)

The documentation for this class was generated from the following files:

- [alteraralbum.h](#)
- [alteraralbum.cpp](#)

## 4.4 AssociarWindow Class Reference

Inheritance diagram for AssociarWindow:

### Public Member Functions

- **AssociarWindow** (int i, int j, QList< int > aux, QList< int > a, QList< int > b, QList< int > c, QWidget \*parent=0)

The documentation for this class was generated from the following files:

- associarwindow.h
- associarwindow.cpp

## 4.5 ConfiguracaoNiveis Class Reference

Inheritance diagram for ConfiguracaoNiveis:

### Public Member Functions

- **ConfiguracaoNiveis** (int i, QString dir, QWidget \*parent=0)

The documentation for this class was generated from the following files:

- configuracaoniveis.h
- configuracaoniveis.cpp

## 4.6 Ficheiros Class Reference

The [Ficheiros](#) class is used for saving this program's data permanently using binary files.

```
#include <ficheiros.h>
```

## Public Member Functions

- [Ficheiros](#) ()  
*Ficheiros::Ficheiros* is the constructor by default.
- void [inicializar](#) (QList< [Album](#) \*> &, QList< [Pessoa](#) \*> &)  
*Ficheiros::inicializar* reads all initial data from files.
- void [escreverPessoas](#) (QList< [Pessoa](#) \*> &)  
*Ficheiros::escreverPessoas* saves information about a list of people.
- void [escreverAlbums](#) (QList< [Album](#) \*> &)  
*Ficheiros::escreverAlbums* saves information about the list of albums.
- void [escreverPaginas](#) (QList< [Album](#) \*> &)  
*Ficheiros::escreverPaginas* saves information about a list of pages.
- void [escreverFotos](#) (QList< [Album](#) \*> &, int, int)  
*Ficheiros::escreverPaginas* saves information about a list of photographs.
- void [escreverAssociacoes](#) (QList< [Album](#) \*> &, QList< [Pessoa](#) \*> &)  
*Ficheiros::escreverAssociacoes* saves a list of people that are associated to one or more photographs.
- void [inicializarAssociacoes](#) (QList< [Album](#) \*> &, QList< [Pessoa](#) \*> &)  
*Ficheiros::inicializarAssociacoes* reads a list of people that are associated to one or more photographs.

### 4.6.1 Detailed Description

The [Ficheiros](#) class is used for saving this program's data permanently using binary files.

The documentation for this class was generated from the following files:

- [ficheiros.h](#)
- [ficheiros.cpp](#)

## 4.7 Foto Class Reference

The [Foto](#) class is used represent a photo.

```
#include <foto.h>
```

## Public Member Functions

- [Foto](#) (QString, QString, QString, QString, QFileInfo)  
*Foto::Foto* is one of the [Foto](#) class constructor.
- [Foto](#) (QString, QString, QString, QString)  
*Foto::Foto* is one of the [Foto](#) class constructor.
- void [setNomeFoto](#) (QString)  
*Foto::setNomeFoto* sets the name of the photograph.
- void [setDataFoto](#) (QString)  
*Foto::setDataFoto* sets the date of the photograph.
- void [setDirectorioFoto](#) (QString)  
*Foto::setDirectorioFoto* sets the current directory of the photograph.
- void [setFileInfo](#) (QFileInfo)  
*Foto::setFileInfo* sets the fileInfo of the photograph.

- QString [getNomeFoto](#) ()  
*Foto::getNomeFoto* returns the name of the photograph.
- QString [getDataFoto](#) ()  
*Foto::getDataFoto* returns the date of the photograph in QString format.
- QPixmap [getPixFoto](#) ()
- QFileInfo [getFileInfo](#) ()  
*Foto::getFileInfo* returns the fileInfo of the photograph.
- QString [getResolucaoFoto](#) ()  
*Foto::getResolucaoFoto* returns the resolution of the photograph in QString format.
- QString [getDirectorioFoto](#) ()  
*Foto::getDirectorioFoto* returns the current directory of the photograph.

## Public Attributes

- QList< [Pessoa](#) \* > **ListaPessoas**

### 4.7.1 Detailed Description

The [Foto](#) class is used represent a photo.

### 4.7.2 Constructor & Destructor Documentation

#### 4.7.2.1 Foto() [1/2]

```
Foto::Foto (
    QString nome,
    QString directorio,
    QString resolucao,
    QString data,
    QFileInfo info )
```

[Foto::Foto](#) is one of the [Foto](#) class constructor.

#### Parameters

<i>nome</i>	is the Photograph's name.
<i>resolucao</i>	is resolution of the photograph
<i>data</i>	is the photograh's date of creation
<i>pixmap</i>	is the QPixmap of the photograph
<i>info</i>	contains information about the file that contains the photograph

#### 4.7.2.2 Foto() [2/2]

```
Foto::Foto (
    QString nome,
    QString directorio,
    QString resolucao,
    QString data )
```

[Foto::Foto](#) is one of the [Foto](#) class constructor.

##### Parameters

<i>nome</i>	is the Photograph's name.
<i>resolucao</i>	is resolution of the photograph
<i>data</i>	is the photograh's date of creation

### 4.7.3 Member Function Documentation

#### 4.7.3.1 setDataFoto()

```
void Foto::setDataFoto (
    QString data )
```

[Foto::setDataFoto](#) sets the date of the photograph.

##### Parameters

<i>data</i>	is the date to be given to the photograph
-------------	---

#### 4.7.3.2 setDirectorioFoto()

```
void Foto::setDirectorioFoto (
    QString novoDirectorio )
```

[Foto::setDirectorioFoto](#) sets the current directory of the photograph.

##### Parameters

<i>novoDiretorio</i>	is the new directory to be given to the photograph
----------------------	--

## 4.7.3.3 setFileInfo()

```
void Foto::setFileInfo (
    QFileInfo info )
```

[Foto::setFileInfo](#) sets the fileInfo of the photograph.

## Parameters

<i>info</i>	is the QFileinfo to be given to the photograph
-------------	--

## 4.7.3.4 setNameFoto()

```
void Foto::setNameFoto (
    QString nome )
```

[Foto::setNameFoto](#) sets the name of the photograph.

## Parameters

<i>nome</i>	is the name to be given to the photograph
-------------	---

The documentation for this class was generated from the following files:

- [foto.h](#)
- [foto.cpp](#)

## 4.8 ImageViewer Class Reference

Inheritance diagram for ImageViewer:

## Public Member Functions

- **ImageViewer** (QString loc, QWidget \*parent=0)

The documentation for this class was generated from the following files:

- [imageviewer.h](#)
- [imageviewer.cpp](#)

## 4.9 MainWindow Class Reference

Inheritance diagram for MainWindow:

### Public Member Functions

- [MainWindow](#) (QWidget \*parent=0)  
*MainWindow::MainWindow is the default constructor of this class.*
- [~MainWindow](#) ()  
*MainWindow::~~MainWindow is the default destructor of this class.*

The documentation for this class was generated from the following files:

- mainwindow.h
- mainwindow.cpp

## 4.10 NovaPagina Class Reference

Inheritance diagram for NovaPagina:

### Public Member Functions

- **NovaPagina** (int i, QWidget \*parent=0)

The documentation for this class was generated from the following files:

- novapagina.h
- novapagina.cpp

## 4.11 NovoAlbum Class Reference

Inheritance diagram for NovoAlbum:

### Public Member Functions

- **NovoAlbum** (QWidget \*parent=0)

The documentation for this class was generated from the following files:

- novoalbum.h
- novoalbum.cpp

## 4.12 NovoPerfil Class Reference

Inheritance diagram for NovoPerfil:

### Public Member Functions

- **NovoPerfil** (QWidget \*parent=0)

The documentation for this class was generated from the following files:

- novoperfil.h
- novoperfil.cpp

## 4.13 Pagina Class Reference

The [Pagina](#) class is used to represent a page.

```
#include <pagina.h>
```

## Public Member Functions

- [Pagina](#) (QString, QString, QString, QString)  
*Pagina::Pagina is one of the Foto class constructor.*
- [Pagina](#) (QString, QString, QString, QString, QString, QDate)  
*Pagina::Pagina is one of the Foto class constructor.*
- [Pagina](#) (QString, QString, QString, QString, QDate, QDate)  
*Pagina::Pagina is one of the Foto class constructor.*
- [Pagina](#) (QString, QString, QString, QString, QString, QDate, QDate, QDate)  
*Pagina::Pagina is one of the Foto class constructor.*
- void **adicionarFoto** ()
- void **removerFoto** ()
- bool **associarPessoaPagina** ()
- bool **eliminarPessoaPagina** ()
- QString **getNomePagina** ()  
*Pagina::getNomePagina returns the name of the page.*
- QDate **getDataInicioPagina** ()  
*Pagina::getDataInicioPagina returns the initial date of the page.*
- QDate **getDataFimPagina** ()  
*Pagina::getDataFimPagina returns the ending date of the page.*
- QString **getPessoaPagina** ()
- void **pesquisarPagina** ()
- QString **getPastaPagina** ()  
*Pagina::getPastaPagina returns the directory of the page.*
- QString **getTipoDePagina** ()  
*Pagina::getTipoDePagina returns the type of the page.*
- QString **getDescricaoPagina** ()  
*Pagina::getDescricaoPagina returns the description of the page.*
- QString **getTipoDeFesta** ()  
*Pagina::getTipoDeFesta returns the type of party of the page.*
- QDate **getDataPagina** ()  
*Pagina::getDataPagina returns the date of the page.*
- void **setPasta** (QString)  
*Pagina::setDataPagina sets the date of the page.*
- void **setDataInicial** (QDate)  
*Pagina::setDataInicial sets the inicial date of the page.*
- void **setDataFinal** (QDate)  
*Pagina::setDataFinal sets the final date of the page.*

## Public Attributes

- QList< [Foto](#) \* > **ListaFotos**
- QList< [Pessoa](#) \* > **ListaPessoas**

### 4.13.1 Detailed Description

The [Pagina](#) class is used to represent a page.

## 4.13.2 Constructor & Destructor Documentation

### 4.13.2.1 Pagina() [1/4]

```
Pagina::Pagina (
    QString nome,
    QString pasta,
    QString descricao,
    QString tipo )
```

[Pagina::Pagina](#) is one of the [Foto](#) class constructor.

#### Parameters

<i>nome</i>	is the Page's name.
<i>pasta</i>	is the Page's directory.
<i>descricao</i>	is the page's description
<i>tipo</i>	is the type of the page

### 4.13.2.2 Pagina() [2/4]

```
Pagina::Pagina (
    QString nome,
    QString pasta,
    QString descricao,
    QString tipo,
    QString tipoDeF,
    QDate data )
```

[Pagina::Pagina](#) is one of the [Foto](#) class constructor.

#### Parameters

<i>nome</i>	is the Page's name.
<i>pasta</i>	is the Page's directory.
<i>descricao</i>	is the page's description
<i>tipo</i>	is the type of the page
<i>tipoDeF</i>	is the type of party
<i>data</i>	is the date of the page

### 4.13.2.3 Pagina() [3/4]

```
Pagina::Pagina (
```

```

        QString nome,
        QString pasta,
        QString descricao,
        QString tipo,
        QDate dataI,
        QDate dataF )

```

[Pagina::Pagina](#) is one of the [Foto](#) class constructor.

#### Parameters

<i>nome</i>	is the Page's name.
<i>pasta</i>	is the Page's directory.
<i>descricao</i>	is the page's description
<i>tipo</i>	is the type of the page
<i>dataI</i>	is the initial date of the page
<i>dataF</i>	is the ending date of the page

#### 4.13.2.4 [Pagina\(\)](#) [ 4/4 ]

```

Pagina::Pagina (
        QString nome,
        QString pasta,
        QString tipo,
        QString tipoDeF,
        QString descricao,
        QDate dataInicio,
        QDate dataFim,
        QDate dataP )

```

[Pagina::Pagina](#) is one of the [Foto](#) class constructor.

#### Parameters

<i>nome</i>	is the Page's name.
<i>pasta</i>	is the Page's directory.
<i>tipo</i>	is the type of the page
<i>tipoDeF</i>	is the type of the page
<i>descricao</i>	is the page's description
<i>dataInicio</i>	is the initial date of the page
<i>dataFim</i>	is the ending date of the page
<i>dataP</i>	is the date of the page

### 4.13.3 Member Function Documentation

#### 4.13.3.1 setDataFinal()

```
void Pagina::setDataFinal (
    QDate dataFinal )
```

[Pagina::setDataFinal](#) sets the final date of the page.

##### Parameters

<i>dataFinal</i>	is the date to be given to the page
------------------	-------------------------------------

#### 4.13.3.2 setDataInicial()

```
void Pagina::setDataInicial (
    QDate dataInicial )
```

[Pagina::setDataInicial](#) sets the inicial date of the page.

##### Parameters

<i>dataInicial</i>	e the date to be given to the page
--------------------	------------------------------------

#### 4.13.3.3 setPasta()

```
void Pagina::setPasta (
    QString novonome )
```

[Pagina::setDataPagina](#) sets the date of the page.

##### Parameters

<i>novonome</i>	is the new date to be given to the page
-----------------	---

The documentation for this class was generated from the following files:

- [pagina.h](#)
- [pagina.cpp](#)

## 4.14 Perfil Class Reference

Inheritance diagram for Perfil:

## Public Member Functions

- **Perfil** (int i, QWidget \*parent=0)

The documentation for this class was generated from the following files:

- perfil.h
- perfil.cpp

## 4.15 Pessoa Class Reference

The [Pessoa](#) class is used to represent a person.

```
#include <pessoa.h>
```

## Public Member Functions

- [Pessoa](#) (QString, QDate, QString, QString)  
*Pessoa::Pessoa is the default constructor of the class Pessoa.*
- QString [getNomePessoa](#) ()  
*Pessoa::getNomePessoa returns the name of the person.*
- QString [getGenero](#) ()  
*Pessoa::getGenero returns the gender of the person.*
- QDate [getDataNascimento](#) ()  
*Pessoa::getDataNascimento returns the birthdate of the person.*
- QString [getRelacao](#) ()  
*Pessoa::getRelacao returns the relation between a person and the user.*
- void [setNomePessoa](#) (QString)  
*Pessoa::setNomePessoa sets the name of the person.*
- void [setGenero](#) (QString)  
*Pessoa::setGenero sets the gender of the person.*
- void [setDataNascimento](#) (QDate)  
*Pessoa::setDataNascimento sets the birthdate of the person.*
- void [setRelacao](#) (QString)  
*Pessoa::setRelacao sets the relation between a person and the user.*

### 4.15.1 Detailed Description

The [Pessoa](#) class is used to represent a person.

## 4.15.2 Constructor & Destructor Documentation

### 4.15.2.1 Pessoa()

```
Pessoa::Pessoa (
    QString nome,
    QDate data,
    QString genero,
    QString relacao )
```

[Pessoa::Pessoa](#) is the default constructor of the class [Pessoa](#).

#### Parameters

<i>nome</i>	is the person's name.
<i>data</i>	is the person's birthdate
<i>genero</i>	is the person's gender
<i>relacao</i>	is the relation between the person and the user

## 4.15.3 Member Function Documentation

### 4.15.3.1 setDataNascimento()

```
void Pessoa::setDataNascimento (
    QDate data )
```

[Pessoa::setDataNascimento](#) sets the birthdate of the person.

#### Parameters

<i>data</i>	is the birthdate to be given to the person
-------------	--

### 4.15.3.2 setGenero()

```
void Pessoa::setGenero (
    QString genero )
```

[Pessoa::setGenero](#) sets the gender of the person.

## Parameters

<i>genero</i>	is the gender to be given to the person
---------------	---

## 4.15.3.3 setNomePessoa()

```
void Pessoa::setNomePessoa (
    QString nome )
```

[Pessoa::setNomePessoa](#) sets the name of the person.

## Parameters

<i>nome</i>	is the name to be given to the person
-------------	---------------------------------------

## 4.15.3.4 setRelacao()

```
void Pessoa::setRelacao (
    QString relacao )
```

[Pessoa::setRelacao](#) sets the relation between a person and the user.

## Parameters

<i>relacao</i>	is the type of relation
----------------	-------------------------

The documentation for this class was generated from the following files:

- [pessoa.h](#)
- [pessoa.cpp](#)

## 4.16 Remover Class Reference

Inheritance diagram for Remover:

### Public Member Functions

- **Remover** (QWidget \*parent=0)

The documentation for this class was generated from the following files:

- remover.h
- remover.cpp

## 4.17 SlideShow Class Reference

Inheritance diagram for SlideShow:

### Public Member Functions

- **SlideShow** ([Pagina](#) \*pagina, QWidget \*parent=0)
- **SlideShow** ([Album](#) \*album, QWidget \*parent=0)

The documentation for this class was generated from the following files:

- slideshow.h
- slideshow.cpp

## 4.18 SlideViewer Class Reference

Inheritance diagram for SlideViewer:

### Public Member Functions

- **SlideViewer** (QString ficheiro, [Pagina](#) \*atual, int intervalo, QWidget \*parent=0)
- **SlideViewer** (QString ficheiro, [Album](#) \*atual2, int intervalo, QWidget \*parent=0)
- **SlideViewer** (QString ficheiro, int intervalo, QWidget \*parent=0)
- void **showEvent** (QShowEvent \*)
- void **closeEvent** (QCloseEvent \*event)
- void **resizeEvent** (QResizeEvent \*event)

The documentation for this class was generated from the following files:

- slideviewer.h
- slideviewer.cpp

## Chapter 5

# File Documentation

### 5.1 album.cpp File Reference

```
#include "album.h"
```

#### 5.1.1 Detailed Description

Definitions of the methods of the class [Album](#)

### 5.2 album.h File Reference

```
#include <QString>
#include <QDate>
#include "pagina.h"
#include "pessoa.h"
```

#### Classes

- class [Album](#)

*The [Album](#) class is used to represent albums.*

#### 5.2.1 Detailed Description

Definitions of the class [Album](#)

### 5.3 ficheiros.cpp File Reference

```
#include "ficheiros.h"
```

### 5.3.1 Detailed Description

Definitions of the methods of the class [Ficheiros](#)

## 5.4 ficheiros.h File Reference

```
#include <QApplication>
#include <QObject>
#include <QString>
#include <QDataStream>
#include <QFile>
#include <QDebug>
#include <QPixmap>
#include <QDir>
#include "album.h"
#include "pagina.h"
#include "pessoa.h"
```

### Classes

- class [Ficheiros](#)

*The [Ficheiros](#) class is used for saving this program's data permanently using binary files.*

### Variables

- `QList< Album * > ListaAlbum`

### 5.4.1 Detailed Description

Definitions of the class [Ficheiros](#)

## 5.5 foto.cpp File Reference

```
#include "foto.h"
```

### 5.5.1 Detailed Description

Definitions of the methods of the class [Foto](#)

## 5.6 foto.h File Reference

```
#include <QString>
#include <QDate>
#include <QFileInfo>
#include <QPixmap>
#include <QDebug>
#include "pessoa.h"
```

### Classes

- class [Foto](#)

*The [Foto](#) class is used represent a photo.*

### 5.6.1 Detailed Description

Definitions of the class [Foto](#)

## 5.7 pagina.cpp File Reference

```
#include "pagina.h"
```

### 5.7.1 Detailed Description

Definitions of the methods of the class [Pagina](#)

## 5.8 pagina.h File Reference

```
#include <QString>
#include <QDate>
#include "foto.h"
#include "pessoa.h"
```

### Classes

- class [Pagina](#)

*The [Pagina](#) class is used to represent a page.*

### 5.8.1 Detailed Description

Definitions of the class [Pagina](#)

## 5.9 `peessoa.cpp` File Reference

```
#include "peessoa.h"
```

### 5.9.1 Detailed Description

Definitions of the methods of the class [Pessoa](#)

## 5.10 `peessoa.h` File Reference

```
#include <QApplication>
#include <QObject>
#include <QString>
#include <QDateTime>
#include <QList>
#include <math.h>
#include <QDataStream>
#include <QTextStream>
#include <QDebug>
```

### Classes

- class [Pessoa](#)

*The [Pessoa](#) class is used to represent a person.*

### 5.10.1 Detailed Description

Definitions of the class [Pessoa](#)
